

Works Order Management

Plan, manage, and monitor your current workload from one screen.
Plan and schedule your live and permanent reinstatement jobs.
Manage all support, backfill and site clearance tasks within one place.

- Fully configurable user and role permissions – control of who has access to what data
- Fully configurable validation ensures key mistakes cannot be made
- Schedulers can access and manage all workstreams and allocate tasks/jobs out from one planning screen
- Flexible reporting – reports can be filtered, ordered and exported in multiple formats
- Improves allocation and management of resources
- Export all data into MS Excel or .csv format
- Set up Operatives, Supervisors and Gangs in one place
- Full data capture throughout the order management process
- Receive jobs electronically or upload manually
- Set up Surface Types, Material Types in one place
- The integration of location services such as roadworks.org improve forward planning by helping to maximise productivity and minimise any risks or liabilities
- Manages multiple contracts all within one system, which makes the management of different contracts and workstreams more effective
- Dashboards make it easy to view and access job data
- Advanced scheduling of reinstatement tasks, tasks then only becoming active once dependent activities are complete.
- Jobs (and Tasks) can be planned and prioritised against resources, allowing for the generation of daily whereabouts. Gangs will receive jobs via depotnet mobile
- Job and task statuses are updated real time in line with depotnet mobile
